

Allergy

From adult to pediatric allergy, physicians use Cerner's certified Ambulatory EHR to give more time back to their patients and their staff. With Cerner's allergy EHR, you can document family history, refill prescriptions, and refill vaccines from a single screen. Key features include:

- Injection forms and skin prick test procedure notes built into our robust system
- Alerts pull in Cerner's strong drug interaction database to immediately notify you of drug-allergy reactions
- Referral letters are customized within seconds and include food allergy letters and letters for allergy supplies
- Quick documentation of codified allergies, side effects and adverse effects from one screen

Key Benefits

- More than 850 templates, including Allergy-specific
- Orders & Results tracking creates value and time saving
- ePrescribe sends orders directly to preferred pharmacies meaning no wait time for the patient

“Prior to the EHR, it used to take seven days to get transcriptions back. Now, with Cerner Ambulatory EHR, my documentation is done the same day.”

Robert Go, MD — Pulmonary Allergy Critical Care and Sleep Associates (PACCSA)
