

Cardiology

Cerner studied cardiologists to create a solution that manages throughput, improves practice efficiency and provides quality tools to enhance workflow and reduce redundant paperwork. With tools such as voice recognition, documentation templates, flow sheets and e-Prescribing, cardiologists using Cerner's EHR report they are increasingly efficient and save up to two hours a day.

- Ability to digitize testing devices such as lab and imaging equipment, pushing results to you seconds after they are acquired
- Extensive content highlighting cardiology non-invasive procedure notes; content structure facilitates enhanced physician documentation
- Chronic condition management available for cardiology specific conditions i.e. coronary artery disease, atrial fibrillation, heart failure or hypertension

Key Benefits

- Allows seamless import between hospital and physician practice
- Creates efficient diagnostic workflows, image management and analysis
- Promotes cardiac disease management through health maintenance protocols

“With Cerner’s EHR, e-Prescribing has provided a significant gain in productivity for our clinical staff.”
