

# Dermatology

In creating Cerner's dermatology EHR, we studied how dermatologists like you work when it comes to workflow and data at the point of care. Cerner Ambulatory's online dashboard summary of the patient's chart is customizable on a per-user basis for greater office flexibility. Physicians use our certified EHR to:

- Easily access and manage patient skin history on one screen and effectively treat and diagnose individual needs. e.g. skin cancer treatment and history
- Effectively create and insert pictures and detailed drawings of the body, moles, rashes and lesions into dermatologic specific notes
- Quickly access dermatology and Mohs specific micrographic surgery templates to document information
- Seamlessly track Orders & Results within the dermatology workflow

## Key Benefits

- Bill for multiple lesion & rash treatments in a single visit
- Customize your notes in a variety of dermatology-specific templates
- Point of care Patient Education facilitates discussions for a better skin care outcome

“The unique part of Cerner’s solution is that you can customize to your practice’s needs.”

Shirley Sherwood, Office Manager — Kansas City Dermatology (Overland Park, KS)
