

Endocrinology

Using Cerner Ambulatory EHR, endocrinologists can electronically connect with affiliated hospitals to view pertinent laboratory results, enabling seamless import between hospital and physician practice at the point of care. Cerner's Clinical Summary is customizable on a per-user basis and provides a dashboard view of patient data. Additional key features include:

- Track, trend, graph and print flow sheets from lab results to constantly monitor chronic conditions
- Chronic condition management templates available for hormone-specific conditions i.e. diabetes, thyroid diseases, osteoporosis, hypertension and cholesterol (lipid) disorders
- Orders & Results integration allows you to receive labs and X-rays from the hospital while with the patient

Key Benefits

- Patient Education materials, such as prescription meal plans, facilitate discussion
- ePrescribe sends orders directly to patient's pharmacy
- Referral letters are customized within seconds

“Cerner is a company who has become clinically integrated. They understand the clinical world, the needs of the practice of medicine. They understand the needs of the practice of hospital work and ambulatory centers.”

Carlos Vigil, DO — United Hospitalist Group (Rancho Cucamonga, CA)
