

Family Practice

Cerner's on-staff clinicians continuously work to optimize Cerner's Ambulatory EHR which family physicians use to coordinate the health care for patients of all ages, from sickness and wellness exams, to sports physicals. Together, family physicians and Cerner successfully manage chronic conditions, immunizations, every day routine checkups and well child visits with increased efficiency, quick access to information and timely updates.

- Cerner's Clinical Summary, an online dashboard view, allows the clinician to view, place orders, and document the visit all from a single screen
- Recommendations alert physicians to overdue patient orders, such as a colonoscopy or mammogram, based on age and condition
- Integrated ePrescribe and Patient Portal capabilities reduce office phone calls and increase patient satisfaction

Key Benefits

- More than 850 templates to easily document multiple complaints per visit
- Send results/renewals to a proxy or office pool for out of office coordination
- Ready to email or print referral letters

“The clinical summary pulls in the medication, problem list, health maintenance and more. Cerner EMR makes us better practicing physicians.”
