

# Neurology

Cerner Ambulatory offers physicians a high-quality, intuitive EHR to effectively document the diagnosis of neurological disorders as well as brain and spine injuries. Neurologists feel confident that Cerner's comprehensive clinical dashboard summary can provide muscle measurement and nerve function documentation all from a single screen. Other features include:

- Neurology-specific templates for conditions such as Alzheimer's and epilepsy as well as general exams including headaches and migraines
- Drug to drug interaction checking against the entire medication list in the patient's chart for increased safety
- Orders & Results integration to efficiently receive labs and X-rays from the hospital at the point of care
- Dragon Medical transcribes dictations in real-time and eliminates traditional transcription costs

## Key Benefits

- Effectively manage patients with multiple conditions
- Insert and edit drawings of the brain into documents and Neurology-specific notes
- ePrescribe solution provides safety around medication management

“Cerner is the most intuitive, easy-to-use, customizable system. I was able to set it up to the way I worked rather than the other way around.”

Barry Zimmerman, DO — Neurological Associates of Ocean County (Toms River, NJ)
