

Pediatrics

Using Cerner's Ambulatory EHR pediatricians access a complete picture of a child's history and needs from a single screen, document parent and patient concerns at the point of care, and more:

- Educate and connect with children and their parents with interactive growth charts and patient education materials
- Upload images directly into the physical examination for documentation
- View next due health maintenance items to enhance safety
- Track vaccination schedules, including combination vaccines, with the immunization record by age and vaccine
- Manage pediatric conditions and keep up-to-date on developmental preventative care requirements with order sets

Key Benefits

- Pediatric-specific templates built right into the system
- Sick and well child visit exam notes
- Allergy/drug interaction checking
- ePrescribe capability for no pharmacy wait time

“Cerner works specific to pediatrics through growth charting and ease of use with the ePrescribe system. That is what attracted me to it.”

Rodrigo Argenal, MD—Argenal Pediatrics (McAllen, TX)
